### Global Warming: Science and Politics of a Contemporary Issue

University of South Florida

Fall 2011

Prof J.A. Cunningham

### Reading List

New books are appearing all the time on the topics of global warming and global climate change. Some of these are intended for academic purposes (e.g., university classes), and some are intended for a more general audience. You are encouraged to read as many of these as you can! However, please be aware that each book will have its own biases, and many may contain outright errors, or, at the least, may “spin” the facts to promote a particular political agenda. One of the goals of this class is that you learn to evaluate the validity and veracity of different arguments on this complex topic.
