Welcome to the USF Virtual Application Pilot

Your course section is participating in an exciting new pilot program that will allow you to access many of the applications that exist in the computer labs through any computer that has web access. This project has been funded through the Student Technology Fee. The following applications will be available through this pilot: (Applications marked with an * are currently available, others will be available soon)

- SAS
- SPSS
- MATLAB*
- Mathematica
- Maple 12
- Autocad 2009*
- Solid Works*
- Maya*
- Civil 3D
- Revit
- 3DS Max
- Adobe Master Collection CS4
- Chemcad*
- Arena

Please note that although these applications are the Windows version, you can access them from most computers, including Windows based PCs, Macs, and Linux based machines. You can even run these apps on your iPhone.

To access the Virtual Application website, open a web browser and go to apps.usf.edu. You can use this area to give your feedback and get the latest information and documentation for the project. You can hit the login button to login with your NETID, and then you will be able to get access to the applications. Keep in mind that this website is only available to the students of the course sections participating in this trial. Also, since this is a pilot project, we will be working throughout the spring semester on changes and enhancements to the site. There will be times that the applications might not be available through the website, but they will continue to be available to you in the computer labs as before.

For help with the apps.usf.edu website, please contact the IT helpdesk at 813-974-1222 or email help@usf.edu. We will be posting documentation and further instructions on the apps.usf.edu site during the first week of classes, so please check back there often.
