

- A. equally spaced
- B. in ascending or descending order
- C. integers
- D. positive

Given n+1 data points  $(x_0, y_0), (x_1, y_1), \dots, (x_{n-1}, y_{n-1}), (x_n, y_n)$ , and assume you pass a function f(x) through all the data points. If now the value of the function f(x) is required to be found outside the range of given x-data, the procedure is called
